Creation of national standards (2020-1999):

Creation of all national standards of Ukrmetrteststandard from 1999 to 2020 occurs through the implementation of special scientific projects within the framework of the State Scientific Programs for the development of the national standard base. Special scientific projects are also carried out annually to study the metrological characteristics of each national standard. Within the framework of these projects, comparisons of national standards of regional metrological organizations are carried out.
